PROFESSIONAL SUMMARY

Product builder and delivery leader who does the work from the product seat and ships AI and automation into production: shapes the need, writes the requirements, epics, and stories, specifies APIs, ETL, and data mappings, runs the backlog and sprints, hand-tests through QA and UAT, and ships to production. At JPMorgan Chase, wrote the specifications for and hand-tested an automated appraisal decisioning service, then carried it through risk, compliance, legal, and audit to production: 10% better accuracy, 30% less manual review, and $2M+ in annual savings. At Kind Lending, prototyped an LLM-assisted intake front end in Cursor and shipped it with two developers, cutting requirements turnaround from weeks to hours. Also led the teams around the work: up to six international Agile teams, product-owner direct reports, and a global group grown from 40 to 65+.

TECHNICAL SKILLS

Product & program delivery: Product Management · Technical Program Management · Product Delivery · Intelligent Automation · Requirements Analysis · Agile Methodologies · Backlog Prioritization · User Acceptance Testing (UAT) · Release Management · Blue/Green Release Gates · Roadmaps & Milestones · Risk & Mitigation Planning · Jira · Jira Align · Confluence

AI & automation: Workflow Automation · Automated Decisioning · LLM Workflow Design · AI Agents · Agent Orchestration · Prompt & Context Engineering · AI Agent QA & UAT · Claude Code · Cursor · ChatGPT · Codex · Git/GitHub · Supabase · Vercel

Systems & data: API & ETL Specifications · Data Mapping & Conversion (MISMO) · EDI · Rules Engines (Sapiens) · SAS · Vendor Platform Integration (Encompass, Cotality CMS, Empower, Blue Sage) · Cloud-Hosted Platforms on AWS, Azure, GCP

Measurement: Weighted Scoring Models · Tableau · Power BI · Six Sigma DMAIC (Black Belt)

EXPERIENCE

Kind Lending — SVP, Product & Platform | 2025–2026

Owned technology delivery for wholesale and retail origination platforms processing $1B+ in monthly volume; tripled the distributed technology team.

- Prototyped the requestor-facing intake front end in Cursor and delivered it to production with two back-end developers building from specs: an LLM-assisted workflow that converts unstructured business requests into Jira epics and stories meeting Definition of Ready, cutting requirements turnaround from weeks to hours.
- Owned agent QA and business-owner UAT for a 20-agent mortgage-operations AI matrix, co-led with the CTO from product definition through handoff to engineering: 7 agents in production and 2 in UAT.
- Owned QA and release: raised release-timeline adherence to 100%, delivered role-specific release notes 3 days before launch instead of after, and ran user demos, training rollouts, and post-release warranty support.
- Consolidated PMO, email, help-desk, and informal requests into one governed delivery funnel with a codified taxonomy and prioritization cadence, cutting release churn by 25%+; unified siloed development pipelines into one stable architecture.
- Ran the Executive Steering Committee cadence (roadmap, backlog, resourcing, and decision requests to the C-suite) and weekly working sessions with the founder of LOS vendor Blue Sage.

JPMorgan Chase & Co. — Vice President, Product | 2018–2025

Owned all collateral technology for the retail first-mortgage channel: origination platform (MX, later Encompass), appraisal AUS operations, title, condo approvals, and appraisal-provider quality tracking. Led 15 direct and 50+ dotted-line reports across the U.S., India, and the Philippines.

- Conceived APDS, an appraisal-eligibility decisioning automation service on the Sapiens rules engine with state-aware dynamic logic and human-in-the-loop routing for borderline cases. Authored the PRDs, stories, and API/ETL specifications engineering built against, and hand-tested every stage through UAT and Blue/Green release gates. Delivered 10% better accuracy, 30% less manual review, and $2M+ in annual savings.
- Designed the APDS production controls and carried them through risk, compliance, legal, and audit sign-off: availability requirements, no-run conditions with human fallback, auditability, and fair-lending disparate-impact review.
- Ran the Jira backlog directly with ICE and Cotality engineering to deliver the Encompass Partner Connect (EPC) gateway, a first implementation that replaced Chase's SDK-based custom integration and became the first-mortgage standard; recommended the vendor-agnostic architecture realized through the Encompass transition.

- Hands-on product owner for Appraisal across up to six international Agile delivery teams, later consolidated to three: ran sprint planning and reviews, backlog grooming, and story-point proposals; wrote epics and stories; set Definition of Ready and Done; managed Jira Align, dashboards, and executive reporting. Led direct-report product owners for Title, Condo, and major initiatives.
- Built a weighted impact/cost/effort scoring model, later run in Jira, triaging an approximately 8,000-item intake backlog to 2,400 viable items and a prioritized top 380; presented architecture and build-versus-buy options to executives with full costing.
- Owned the technical response to regulatory action plans as a standing duty: proposed solutions, estimated cost and timeline, built milestone timetables reported to regulators, and set mitigation controls.
- Led Agile delivery of the Home Equity platform replacement, contract to pilot in 9 months versus an 18+ month norm; scaled the global product and engineering team from 40 to 65+, expanding delivery capacity 25%.

loanDepot — Director, Product Management | 2016–2017

- Owned prioritization, requirements, development oversight, testing, and delivery for the mello consumer, loan-officer, and white-label wholesale-broker portals, integrated with the Lightning online application, Salesforce CRM, and point of sale; built pipeline dashboards showing status, cycle times, and predicted milestone dates.
- Led the Docutech document-vendor integration, enabling 2M+ e-signings; drove LOS improvements that doubled distributed-channel volume through the TRID conversion with no pipeline gap.

imortgage, a Division of loanDepot — Director, Program Management | 2014–2016

- Led development for the 120-branch Empower LOS conversion, including the wholesale broker channel and approximately 270 loan products, in nine months against an 18+ month norm as annual originations grew from $13.2B to $37.9B.
- Designed system-of-record boarding across pipeline, secondary-market activity, servicing, and general-ledger reconciliation, achieving 100% continuity through cutover.

Consulting Experience

The North Highland Company — Senior Manager | 2012–2014

- **Walt Disney Parks & Resorts:** Ran IT program management for Disney Parks online through true Agile delivery of ongoing feature releases reaching 10M+ visitors.
- **loanDepot / imortgage:** Ran IT program management for the legal merge event and staged the 120-branch Empower conversion, leading to a direct hire to complete it.

SMCI (Software Management Consultants, Inc.) — Senior Consulting Manager | 2011–2012

- **Bank of America Home Loans & Insurance Services:** Designed the data methods and algorithms that identified affected loans for an FHA/HAMP In-Line QA remediation, then executed the analysis and remediation hands-on.

Norman Technologies (Norman Group) — Consultant / Senior Project Manager | 2009–2011

- **Wells Fargo / Wachovia treasury integration ($8.8B merger):** Led multi-release cash-vault platform data bridging, EDI, and data conversion through general-ledger reconciliation, writing attribute-level specifications for the vault integration. Directed 78 cash-vault consolidation events, reducing redundancy by 25%+.

Troy Consulting, LLC — Senior Consultant | 2008–2009

- **Microsoft:** Rewrote the Microsoft Solutions Framework into the Solutions Delivery Methodology and co-developed the Services Estimation Tool, both adopted as Services Delivery Worldwide standards; unified 1,800 legal contracts into 180, cutting revision turnaround from months to two weeks.

Earlier Career | 1996–2008

- **Washington Mutual — Consumer Group Program Manager (2002–2005), then Vice President, Enterprise Risk Management (2005–2008):** Owned the $18M Enterprise Decision Engine, the bank's first centralized credit-decisioning platform (rules engine, ETL, database, web transport), processing $205.1B in annual originations. Led the $3.4M Common Analytics Platform on Oracle.
- **IndyMac Bank and Aames Home Loan (1996–2002):** Built and ran a production ETL platform delivering document data to an external vendor, owning the mapping logic, triggers, and annual MISMO remapping. Did hands-on ETL and data mapping across nine automated-underwriting integrations and led Wave 1 of a Six Sigma rollout tied to $6.8M in FY2002 savings.

EDUCATION & CERTIFICATIONS

Bachelor of Arts, Liberal Arts and Sciences — University of Kansas · Six Sigma Black Belt — Six Sigma Academy · Professional Scrum Product Owner I — Scrum.org
